

Fürstenzell, May 2024

Dear Sir or Madam,

The European Chemicals Agency (ECHA) defines a candidate list of **Substances of Very High Concern (SVHC)**, which is being updated regularly (<https://www.echa.europa.eu/de/candidate-list-table>). The use of SVHC substances may be subject to an obligation for authorization in future after being inclusion in Annex XIV of Regulation (EC) No. 1907/2006 - REACH Regulation.

According to Article 33 of the REACH Regulation, suppliers of articles have the duty to inform their customers, when SVHC candidate substances are present in a concentrations above 0.1% (w/w) in the purchased products.

In the following you will find an overview of all current, SVHC containing PREMA products in Europe. Indications on handling and information on protective measures for a safe use can be found in the corresponding safety data sheets ([PREMA GMBH - Download \(prema24.com\)](#)) or for adhesive/balance weights and tyre accessories within this document.

For our vulcanized rubber products, exposition to lead compounds is unlikely under the intended and foreseeable use. In the case of the below mentioned adhesive/balance weights and tyre accessories, exposure via skin (permeation) is minimal under the intended and foreseeable use. To avoid skin contact with lead, users should wear protective gloves (depending on requirements, the recommendations from manufacturer of protective glove have to be considered).

The contained amounts mentioned below has to be considered during disposal.

With the last update, the following SVHC substance are listed on the SVHC candidates list, which are ingredients of the below mentioned products with a concentration above 0.1% (w/w).

SVHC substance	CAS No.	Admission date
Lead	7439-92-1	27.06.2018

In the case of further questions, please contact our product management.

Overview of PREMA products with SVHC substances

SKU.No.	Product	Content (w/w)
Contains Lead (CAS-No. 7439-92-1)		
2425855	Weights Truck LTU-150	96 %
2425860	Weights Truck LTU-200	96 %
2425865	Weights Truck LTU-250	96 %
2425870	Weights Truck LTU-300	96 %
2425875	Weights Truck LTU-350	96 %
2425880	Weights Truck LTU-400	96 %

* PREMA products with elemental lead are solely third-party articles. The potentially toxic hazard caused by lead has been known for years and is taken into account in occupational safety laws depending on the application. Exceptions regarding lead as component of alloys is include i.a. in Directive 2000/53/EC on end-of-life vehicles and Directive 2011/65/EU (RoHS Directive). Lead is an important alloy element in long-established alloy systems such as aluminum and copper materials, which show by the presence of lead numerous technological advantages in comparison to alloys lead, e.g. better tightness, corrosion resistance, sliding and friction properties, machinability and thus better processing.

Tyre's best friend

The information in this document corresponds to our current state of knowledge at the time of publication. With the obligation to providing information within the supply chain, we are dependent on information that are available to us by our suppliers. We are using raw materials in technical quality for our production processes, no statements on presence and content of impurities are possible.

Best regards
